

WHAT IS CLAIMED IS:

1. A saucer to hold various kinds of cups and for use with a microwave oven, comprising:
  - a cup seating part having a disc shape; and
  - an engaging part to removably engage with a saucer holder provided on the microwave oven.
2. The saucer according to claim 1, wherein said saucer is made of a transparent material.
3. The saucer according to claim 1, further comprising:
  - a wall to surround a seat of the cup seating part and perpendicularly extend from an edge of the seat to a predetermined height.
4. The saucer according to claim 3, further comprising:
  - a helical thread or a helical groove interiorly formed on the wall of the saucer so that the saucer engages with the saucer holder when rotating the saucer over the saucer holder at a predetermined angle.
5. The saucer according to claim 3, further comprising:
  - an elastic material layer interiorly provided along the wall of the saucer.

6. The saucer according to claim 5, wherein said elastic material layer comprises a silicone layer.

7. The saucer according to claim 1, further comprising:  
a magnet layer or a magnetic material layer provided at a predetermined portion of the saucer.

8. The saucer according to claim 7, wherein said magnet layer or magnetic material layer is interiorly provided along the wall of the saucer.

9. The saucer according to claim 7, wherein said magnet layer or magnetic material layer is provided on an outer surface of the seat.

10. The saucer according to claim 7, wherein said magnet layer or magnetic material layer is interiorly provided on the wall of saucer.
